

ILABTHINKROOM

March 2008

To design a brainstorming room for a new development incorporating colour change LED lighting and height adjustable desks.

iLAB Thinkroom

Nucleus Science Centre

By KLC

KLC were invited to design and build the iLAB, designed to encourage everyone to think positively and creatively. The concept behind the iLAB, relies on colour psychology, stimulating emotional responses based on different ambient colours. These are brought into the space through colour change LED technology concealed behind bespoke full height curved walls. The innovation carries through to the full height magnetic whiteboard walls throughout the iLAB ensuring creativity isn't suppressed.

With a host of state of the art technology including drop down projector, twin 42" screens, 5.1 surround sound, DVD, VHS, cordless head microphones all controlled though a touch screen control panel. Electronic sit/stand height adjustable desking with bespoke whiteboard tops allow for occupants of all ages. Full height white-board movable walls can be glided into place to conceal the outside world ready for the iLAB experience.

Designed to help you and your team to think clearly and imaginatively, it can help you to complete complex tasks quickly and efficiently in ways that include and motivate everyone taking part.

Guaranteeing anonymity, the iLAB software encourages innovative and courageous thinking. Similarly, it organises and prioritises the ideas that you generate, keeping a record of the process and highlighting areas where the group differs and where it agrees. The iLAB can be as simple or as sophisticated as you need it to be.

The iLAB is suitable for groups up to 12 people from any organisation, company or institution that could benefit from clear, creative thinking.

Project Overview

Client:	Start International
Location:	Dartford Kent
Size:	1000sq.ft
Timescale:	3 weeks
